09	Handling Difficult Situations	15
10	Etiquette, Dos and Don'ts	17
11	Safety, Trust and Responsible Communication	18
12	Project, Brand and Sponsored Spaces	20
13	Closing, Follow-Up and Long-Term Growth	21
14	The Host's Toolkit	23
15	Final Mastery Check	25
	The Responsibility of the Microphone	26

How to read this handbook

New to Spaces? Read Chapters 1 to 9 in order. Experienced hosts can jump to moderation, difficult situations and safety, then use Chapters 13 and 14 as a working toolkit. Statements are labelled so you always know what kind of claim you are reading:

FACT	Verifiable, usually about how X Spaces works, checked against X's official Help Center in October 2026. Features change: re-check before important events.
BEST PRACTICE	Established approaches from professional moderation, broadcasting and community management.
RECOMMENDATION	The author's practical advice. A strong starting point; adapt it to your community.
OPINION	A viewpoint on a debated question, offered for reflection.

Important. Nothing in this handbook is financial, legal or investment advice. Projects, people and handles in examples (such as "ChainBridge" or "@MusaAudits") are invented for teaching. X and X Spaces are trademarks of X Corp.; this is an independent publication not affiliated with or endorsed by X Corp. The scripts, checklists and templates may be freely used and adapted. © 2026 TrustChain Academy. First edition, October 2026.

PREFACE

Why This Handbook Exists

In Web3, trust is built in public, one conversation at a time, and live audio is where many of those conversations happen.

Every week, thousands of Web3 conversations take place on X Spaces. Founders explain what they are building. Researchers break down new protocols. Communities debate proposals. And newcomers listen quietly, trying to make sense of an industry that often feels noisy and intimidating.

In each of those rooms is a **host**: the person who decides who speaks, which questions are asked, and whether a misleading claim is challenged or left to spread. In an industry where money moves quickly and mistakes are often irreversible, that is a serious responsibility.

This handbook is for anyone who hosts, moderates, speaks at or organises Web3 Spaces, from complete beginners to experienced hosts. It assumes no prior knowledge. By the end you should be able to plan, open, moderate and close a professional Space; handle difficult moments calmly; protect your audience; and turn every Space into lasting value.

REMEMBER

Hosting is not about having the most impressive voice in the room. It is about making every other voice more useful to the audience.

01

CHAPTER 01

Understanding X Spaces

Before you can host well, you need to understand the room: how it works, who holds which controls, and what live audio is good and bad at.

What is an X Space?

An X Space is a **live audio conversation** on X, the platform formerly known as Twitter. Think of it as a public radio talk show that anyone with the app can join. There is no video and no slides. Listeners understand everything through voices, plus a few on-screen extras: the Space title, pinned posts, emoji reactions and live captions.

FACT Spaces are public: anyone can join as a listener, including people who do not follow the host. People find a Space on their timeline, through a link in a post, or through a link shared by direct message or elsewhere.

How a Space works

1. **Someone creates the Space** and becomes the host. They join with their microphone off.
2. **The host names it**, chooses whether to record, and starts it now or schedules it.
3. **The host invites speakers**. Listeners can also tap a request button to ask to speak.
4. **The conversation happens**. Listeners hear everyone on stage, react with emojis and can view automated captions.
5. **The host ends the Space**, which ends it for everyone. If recorded, the replay becomes available.

Key platform facts for hosts

FACT Checked against X's Help Center in October 2026. X updates Spaces regularly, so confirm in the app before important events.

Feature	What X currently documents
Starting a Space	From the X apps for iOS and Android. On the web, people can join and listen but cannot start a Space. Accounts with protected posts cannot create one.
Speaking capacity	Up to 13 people can speak at once, including the host and up to 2 co-hosts.
Scheduling	One scheduled Space at a time, up to 14 days ahead. Followers can set reminders and are notified when it starts.
Recording	Optional. Once the Space ends, the recording is publicly available until the host deletes it. Hosts can edit the replay's start time to trim dead air.
Captions and reactions	Live captions are served automatically, with a short delay. Listeners can react with a small set of emojis.
Pinned posts	Hosts, co-hosts and speakers can share posts into the Space and pin them for context.
Safety tools	Hosts and co-hosts can mute, remove, report and block participants. "Block and remove" also blocks that account on X. X may end a Space that breaks the X Rules.

Who does what: the five roles

X's app has four built-in roles. Professional Spaces often add a fifth, the **moderator**, which is a job rather than a platform setting.

Role	Platform powers	Responsibility
Host	Creates and ends the Space; adds speakers and co-hosts; mutes, removes, blocks; records.	Overall direction, quality and safety.
Co-host	Invites speakers, manages requests, removes participants, edits the title, manages pinned posts, mutes speakers. Cannot add or remove co-hosts or end the Space.	Supporting the host: managing the stage, spam and safety so the host can focus on the conversation.
Moderator	Usually holds host or co-host powers.	Steering the live conversation: who speaks, for how long, and where it goes.
Speaker	Unmutes and talks; can share posts into the Space.	Staying on topic, respecting time, speaking accurately.
Listener	Listens, reacts, reads captions, requests to speak.	Following the ground rules if invited up.

HOST TIP

Your first co-host is your backup host

FACT If the original host drops out, the first co-host added becomes primary admin. Hosts can also transfer admin rights. Always add your most trusted, best-briefed co-host **first**.

Why Web3 uses Spaces, and where they fall short

Web3 communities are global, online and often **pseudonymous**: people are known by a handle and avatar rather than a legal name. Live audio fills a gap text cannot. Hearing a founder answer an unscripted question reveals more than a polished announcement. Spaces are free and easy to join from a phone. When news breaks, credible voices can gather in minutes. And a weekly Space becomes a community ritual.

But audio has real limits. Complex data, code and interfaces are hard to explain without visuals. Listeners cannot scroll back to a point they missed. Misinformation can be spoken before anyone can check it, and loud voices dominate without strong moderation.

EXAMPLE A DeFi (decentralised finance) protocol wants to walk users through an eight-step interface. A Space is the wrong tool, because nobody can see the screen. Record a short video tutorial, then host a Space for questions about it. Audio is strongest for explanation, discussion and trust.

02

CHAPTER 02

Choosing the Right Format

Every Space has a format, whether the host chose it or not. Naming the format tells speakers and listeners what to expect, and protects everyone's time.

RECOMMENDATION Speaker numbers and lengths below are practical starting points, not platform rules. More speakers almost always means less depth.

Format	Purpose and audience	Speakers · length	Recommended flow	Watch out for
Educational	Teach one concept to beginners and learners	1–3 · 45–60 min	Hook → why it matters → simple explanation → example → misconceptions → Q&A → recap	Unexplained jargon; drifting into a pitch
AMA (Ask Me Anything)	Give a community direct access to a team or expert	1–3 guests · 45–60 min	Short context → host questions → pre-collected questions → live questions	Only friendly questions; 20-minute pitches
Founder interview	Understand how a builder thinks and decides	1 guest · 45–60 min	Origin → problem → key decisions → hardest moment → lessons → Q&A	Slogans instead of specifics; no talk of risk
Fireside chat	Relaxed, in-depth conversation with personality	1–2 · 30–60 min	Personal context → 3–4 themes explored deeply → reflection	Too casual to be useful; host talks too much
Panel	Compare expert perspectives on one topic	3–5 · 60–90 min	60-second intros → framing question → themed rounds → contrarian round → Q&A → one-line closings	Same question to everyone in turn; no real exchange
Technical / developer	Explain how systems work; serve builders	1–4 · 45–75 min	Big picture → components → trade-offs → risks → resources	No pinned diagrams or docs; host pretending to follow
Community discussion / town hall	Hear members; leaders answer for decisions	Rotating · 45–90 min	Agenda → updates → what went wrong → open questions → written summary	Same regulars dominate; hard questions filtered out
Research and analysis	Present and test evidence or findings	1–3 · 45–75 min	Question → method → findings → limitations → implications	Reading numbers without meaning; overclaiming

Format	Purpose and audience	Speakers · length	Recommended flow	Watch out for
Career and opportunity	Help people find realistic paths into Web3	2–4 · 45–75 min	Roles → skills → first steps → spotting fake opportunities → Q&A	“Get rich” framing; ignoring job scams
Project introduction / ecosystem	Introduce one project, or several on one network	1–8 · 30–90 min	Problem → solution → what works today → risks → how to verify (5–7 min per project in ecosystem Spaces)	Back-to-back adverts; undisclosed payment
News / current affairs	Explain what happened and what it means	2–4 · 30–60 min	Verified facts → what is unclear → why it matters → views → what to watch	Rumours presented as news
Debate	Test opposing arguments on a stated motion	2–4 + moderator · 45–75 min	Motion → rules → openings → moderated rebuttals → Q&A → closings	Host taking sides; arguments becoming personal
Networking	Help people meet and collaborate	Rotating · 45–90 min	Rules → host models a 30-second intro → rotating intros → match-making prompts	Endless intros; spam links

To choose, answer three questions. **Who is the audience?** Beginners need educational or fireside formats; experts can handle panels and debates. **What should change for them?** Understanding, trust, connection or judgement. **How many voices does that need?** One great explanation needs one great speaker; a comparison needs several.

HOST TIP**Put the format in the title**

“AMA with ChainBridge” sets different expectations from “ChainBridge Panel”. Name the format in your title and announcement so everyone arrives prepared.

03

CHAPTER 03

Purpose, Planning and Promotion

Great Spaces feel effortless to listeners because the hard work happened before the host pressed “Start”.

The 5P Framework

THE 5P FRAMEWORK

RECOMMENDATION Use these five stages as the backbone of every Space. The rest of this handbook follows the same order.

Step 1: Define the purpose before inviting anyone

Hosts who invite speakers first end up bending the Space around the speakers' agendas. Decide these five things first, and write them down:

Element	Question to answer	Weak	Professional
Objective	Why does this Space exist?	"Talk about DeFi."	"Help beginners understand decentralised lending and its main risks."
Audience	Who exactly is it for?	"The Web3 community."	"Students who have a wallet but have never used a DeFi app."
Topic and scope	What will (and won't) we cover?	"The future of blockchain."	"Can blockchain records reduce land-registry fraud? What has worked, what hasn't."
Outcome	What should listeners know, feel or do afterwards?	"Raise awareness."	"Listeners can name the five most common scams and what to do about each."
Key message	If they remember one sentence, what is it?	—	"No legitimate person will ever need your seed phrase."

Then choose the format (Chapter 2). Good topics usually come from real questions your community keeps asking, confusion after major news, and mistakes you see newcomers repeat.

HOST TIP

The "three replies" test

The same question in three different replies or chats in one week? It deserves a Space.

Step 2: Build an agenda

An agenda turns a chat into a journey. **RECOMMENDATION** Plan for about 90% of the available time; Spaces almost always run over, and the buffer protects your closing, which is where key messages land. Prepare roughly one question per five minutes of conversation, plus three in reserve.

Time	Segment	What happens
0:00–0:05	Soft open	Welcome early arrivals, check speakers' audio, pin key posts
0:05–0:12	Opening	Welcome, topic, context, speaker introductions, ground rules
0:12–0:30	Theme 1	Foundations: what is happening and why it matters
0:30–0:42	Theme 2	Depth: trade-offs, risks, disagreement
0:42–0:55	Audience	Pre-collected and live questions
0:55–1:00	Close	Summary, key message, thanks, what happens next

Step 3: Prepare your technology

Most Space disasters are technical, and most are preventable. Update the app; charge your phone and keep it plugged in; use stable Wi-Fi with mobile data as backup; wear a headset with a microphone; switch on Do Not Disturb; pick a quiet room (soft furnishings reduce echo); and record a test voice note to check your sound. Decide in advance whether to record: recordings become public replays.

Step 4: Plan for what could go wrong

Write down, before the day, what you will do if a speaker cancels (a backup speaker, or extend another segment), if you lose connection (your first co-host takes over), if very few people join, or if spam arrives. Chapter 9 gives the scripts.

Step 5: Promote the Space

Promotion is not hype. It is making sure the people who need the conversation know it exists. Your announcement must answer five questions instantly: **What? Who? When? Why should I care? How do I join?**

FACT When you schedule a Space, people can repost its card and set reminders; they are notified when it starts. X also suggests pinning the announcement to your profile.

When	Action
7–14 days before	Schedule the Space. Publish and pin the announcement. Send speakers the link and a ready-to-post message. Ask for audience questions.
3–5 days before	Share speaker graphics. Post in community channels and with partner communities.
1 day before	Reminder post with your strongest hook. Ask speakers to repost.
2–3 hours before	Final reminder. Pin the question post.
Live	“We’re live” post with link; speakers share; pin resources.

BEST PRACTICE Always state the time with at least one time zone; “7 PM” alone causes missed Spaces. And promote accurately: overhyped announcements attract the wrong audience and cost trust.

04

CHAPTER 04

Selecting and Briefing Speakers

Your speakers are the content. A great host cannot rescue a Space built on the wrong voices.

Six selection criteria

RECOMMENDATION Score each candidate from 1 to 5 on each criterion. A total of 22 or more (out of 30) suggests a strong fit.

Criterion	Ask yourself
Relevance	Are they directly involved in this topic now?
Expertise	Is there evidence: things built, written, researched or taught?
Experience	Have they done it, not just commented on it?
Communication	Can they explain clearly and briefly? Listen to a past Space if possible.
Perspective	Do they add a viewpoint the others lack (role, region, opinion)?
Reliability and value	Do they arrive prepared and respect boundaries? Will listeners leave better informed because they spoke?

Why follower count should not decide

Reach is a bonus, not a qualification. Followers can be inflated. Some of Web3's most knowledgeable people have small audiences. And your reputation becomes tied to every speaker you platform.

EXAMPLE

Two speakers, one choice

For a Space on "How to tell if a protocol is safe": **Speaker A** has 180,000 followers, posts mostly price predictions, and has promoted projects that later collapsed. **Speaker B** has 4,000 followers and is a smart contract auditor who writes clear breakdowns of hacks. Speaker B wins on every criterion except reach, and reach can be solved with promotion. Credibility cannot.

Before inviting someone you don't know, check: Is the account genuine, not an impersonator? Do their recent posts show accuracy or hype? Have they promoted scams? Who pays them, so you can disclose relevant interests?

The speaker briefing

BEST PRACTICE Send a written briefing 48 to 72 hours before the Space and ask speakers to confirm they have read it. Verbal agreements are forgotten; written ones protect everyone. A complete briefing covers ten things:

Include	Example wording
Topic and scope	"Wallet safety for beginners. Not covering price or specific tokens."
Objective and audience	"Students new to Web3; please explain technical terms briefly."
Date and time	In the speaker's own time zone, with start and end times
Flow and speaking order	"Intros → scams → wallet habits → Q&A. You open Theme 1."
Your questions	The main questions they will be asked (follow-ups may vary)
Answer length	"Around 90 seconds to 2 minutes; I may gently step in to keep balance."
Ground rules	Respectful disagreement; no personal attacks or misleading claims
Promotion limits	"Mention your project at your intro and close. No price predictions, return promises or unofficial links. Disclose financial interests."
Technical needs	Join 15 minutes early via the app, headset, quiet place, stable connection; recorded or not
Contact	Who to message if something goes wrong, and how to rejoin if disconnected

HOST TIP

Ask "Is there anything I shouldn't ask you?"

You learn where the sensitive boundaries are (unreleased partnerships, legal matters) without promising to avoid hard topics. For senior speakers, put a three-line summary at the top of the brief.

05

CHAPTER 05

Questions That Get Real Answers

Speakers answer the question they are asked. Vague questions get vague answers. The host's questions are the biggest lever they control.

Eight types of question, and when to use each

Type	Use it to...	Example
Open-ended	Invite explanation, not yes/no	"Why have bridges been such a common target for hackers?"
Follow-up	Get past the rehearsed first answer	"You said the team rewrote the contracts. What specifically changed?"
Probing	Test evidence and reasoning	"What data makes you confident about that?"
Clarifying	Protect beginners from jargon	"In one sentence, what do you mean by 'liquidity'?"
Technical	Explain how something works	"How do you verify off-chain data? And how would you explain that to a ten-year-old?"
Experience	Draw out memorable stories	"Tell us about a time this went wrong for you."
Contrarian	Protect the audience from one-sided narratives	"Critics say this only works in a bull market. What's your answer?"
Audience	Show the community it is heard	"Amara asks: what happens to user funds if the team disappears?"

Weak versus professional questions

Weak	Why it fails	Professional
"Tell us about your project."	Invites a long generic pitch	"What problem frustrated you enough to start this?"
"Is now a good time to buy?"	Invites speculation and implied financial advice	"What do you look at before deciding a project is worth studying?"
"Wasn't the launch great?"	Leading; asks for agreement	"What went better than expected at launch, and what didn't?"
"Are you safe?"	Yes/no; invites reassurance	"What was audited, by whom, and what wasn't covered?"
"Any final thoughts?"	Lazy	"If listeners remember one thing from you today, what should it be?"

The Question Ladder

THE QUESTION LADDER

RECOMMENDATION Climb each theme from simple to deep. Beginners stay with you, and experts still get depth.

EXAMPLE

One theme, five rungs: restaking

Ground: "In simple terms, what is restaking?" **Context:** "Why is everyone talking about it this year?" **Depth:** "Where does the extra yield actually come from?" **Tension:** "What new risks does it add compared with ordinary staking?" **Action:** "What should a beginner check before even considering it?"

Asking a difficult question professionally

Challenge ideas, never dignity. Frame the hard question as the audience's question, ask it plainly, then let the speaker answer fully.

HOST SCRIPT

Asking the hard question

"I want to ask something I know many listeners are thinking. Your token unlock schedule has raised concerns in the community. What's the honest picture, and where can people verify it?"

Avoid double questions and long set-ups. "Why did you launch early, and what's your supply, and are you worried about competitors?" gets one answer at most. Ask one question, keep it shorter than the answer, then be quiet and listen.

06

CHAPTER 06

Opening the Space

The first five minutes decide whether listeners stay. A confident, clear opening tells everyone: this host knows where we are going.

The soft open

Listeners arrive gradually, so many hosts start a few minutes early. Use this "soft open" to greet people by name, check that speakers can be heard, pin the announcement and resources, and say the topic in one sentence for early arrivals. **FACT** X lets hosts edit the replay's start time, so this warm-up can be trimmed from the recording.

RECOMMENDATION Keep it to three to five minutes and start formally within five minutes of the scheduled time. Waiting twenty minutes "for more people" punishes the listeners who arrived on time.

The seven-part opening

THE OPENING FRAMEWORK

Introducing speakers

RECOMMENDATION Write introductions yourself and confirm them with speakers. “Please introduce yourself” often becomes a five-minute biography. The formula: **name** → **current role** → **one relevant credential** → **why they are on this stage today**.

Weak	Professional
“Our next speaker is Musa. Musa, introduce yourself.”	“Joining us is Musa, a smart contract auditor who has reviewed code for more than twenty protocols. He writes some of the clearest breakdowns of hacks I’ve read. Musa, welcome.”

HOST SCRIPT

A complete two-minute opening

“Good evening, good afternoon or good morning, wherever you’re listening from, and welcome. Thanks for spending your time with us. I’m Zainab, and I host the weekly learning Spaces at TrustChain Academy.

Tonight’s topic is one of the most important for anyone new to Web3: **how to stay safe from scams**. If you’ve ever had a strange message from ‘support’ or wondered whether a giveaway was real, this Space is for you. And it matters now, because the scams our community reports are getting more convincing every month.

I’m joined by Musa, a smart contract auditor who has reviewed code for more than twenty protocols, and Grace, who leads community safety for a large Web3 community and has helped hundreds of people who were targeted.

Here’s how this will work. We’ll talk for about forty minutes, then take your questions. Tap the request button when we get there. This Space is recorded, and nothing said here is financial advice. One more thing: no legitimate person in this Space will ever DM you or ask for your seed phrase. If anyone does, block and report.

Grace, let’s start with you. What’s the most common trick you’re seeing right now?”

× COMMON MISTAKE

Opening with an apology

“Sorry, I’m not very good at this...” lowers expectations, and they tend to become self-fulfilling. Open with energy and a clear promise. Also avoid a difficult first question: start easy, then build to depth.

07

CHAPTER 07

Moderation: Steering the Conversation

Moderation is invisible when it is done well. Listeners simply notice that the conversation was clear, fair and worth their time.

Hosting is the whole job: planning, inviting, opening, closing and following up. **Moderating** is the live craft of deciding who speaks, when, for how long and in which direction. Think of the host as the organiser of a football match and the moderator as the referee. In most Spaces you are both.

THE 3S FRAMEWORK

RECOMMENDATION When a Space feels wrong, ask which S is failing. Is the structure unclear? Is the conversation drifting? Is someone or something unsafe? The answer tells you what to fix.

Managing time and speaking balance

BEST PRACTICE Keep a simple tally of who has spoken; a notepad with names and tick marks works perfectly. Rotate who answers first. Bring quieter speakers in by name ("Fatima, you haven't had a chance on this yet"). On panels, ask two speakers per question rather than all five. Note the end time of each segment, check at the midpoint what you will cut if behind, and always protect the final five minutes for the close.

Interrupting professionally: the ACT technique

Every host must interrupt. The skill is doing it so the speaker keeps their dignity and the audience keeps its time. Interrupt at a natural pause, and say the speaker's name first.

THE ACT TECHNIQUE

HOST SCRIPT

Using ACT, then escalating if needed

Gentle: "Musa, that's a really important point about audits, and it connects directly to what users can check themselves. Let me bring Grace in on that."

Firm: "Kwame, I'm going to step in now. We're over time on this question and I promised listeners we'd hear from everyone. I'll come back to you next round."

Transitions and redirection

Transitions tell listeners where they are. Use **Summarise** → **Bridge** → **Ask**: “So far we’ve heard that most scams rely on urgency and fake authority. That raises the question of what users can actually do. Grace, what three habits do you wish every new user had?”

When a speaker drifts: “That’s a fascinating area, honestly a Space of its own. For today, let’s bring it back to wallet security...”

If energy drops (long silences, repeated points, listeners leaving), ask a contrarian question, bring in a new voice, share a concrete example, or summarise and move to the next theme.

Correcting misinformation: the Correction Ladder

When a speaker says something inaccurate or unsupported, you have a duty to the audience. Respond in proportion to the risk.

THE CORRECTION LADDER

HOST SCRIPT

Climbing the ladder

Clarify: “Just so listeners understand, where does that figure come from?”

Contextualise: “Worth adding: the audit covered the lending contracts, but not the new bridge module.”

Correct: “I need to be clear for listeners: no partnership has been announced by either company. Until it appears on both official channels, please treat it as unconfirmed.”

RECOMMENDATION Most issues are solved at Clarify. If a claim could cause financial harm, such as a guaranteed return or a fake partnership, go straight to Correct.

08

CHAPTER 08

Engaging the Audience

Listeners decide minute by minute whether to stay. Design every Space for someone who joins halfway through, slightly distracted, and needs to understand what is happening within thirty seconds.

Using the built-in tools deliberately

FACT Spaces offers emoji reactions, requests to speak, posts pinned into the Space and automated live captions.

- **Reactions as a pulse check:** “If this is new to you, tap a reaction so I can see.”
- **Pinned posts** for resources and a “drop your questions here” thread.
- **Captions** help people in noisy places and people who are deaf or hard of hearing. They stay readable only when speakers don’t talk over each other.

- **Recaps every 10 to 15 minutes:** “For anyone just joining, we’re discussing wallet safety with Musa and Grace...”

Collecting questions and bringing listeners on stage

Collect questions before the Space (replies to the announcement), during it (a pinned question thread) and live (requests to speak). Prioritise questions that represent many listeners, help beginners or fairly challenge speakers. Credit askers by handle; it encourages more questions next time.

1. Announce the Q&A window and how it works.
2. Glance at each requester’s profile before approving, to filter obvious spam or scam accounts.
3. Bring up two or three people at a time, never ten.
4. Ask for one sentence of introduction and one question.
5. Return them to listener status afterwards.

HOST SCRIPT

Opening the floor

“We’re now taking your questions. Tap the request button, and I’ll bring people up two at a time. Give us one sentence about yourself and one question, so we can reach as many of you as possible.”

Quiet audiences are not necessarily disengaged: most listeners never speak. Use low-effort prompts (reactions, one-word replies), invite a friendly regular to break the ice, or ask “Who disagrees with what we’ve just said?”

Large audiences need more structure: two co-hosts (one for requests, one for safety), written questions over live requests, and stricter control of links.

EXAMPLE

Hundreds of listeners suddenly join

A large account shares your Space and listeners jump from 60 to 900, with a flood of requests and spam accounts. Reset the room: assign co-host duties, pause live requests, pin the question post, and restate the topic and rules. “Welcome to everyone just joining. We’re discussing how to spot scams with Musa and Grace. Questions go under the pinned post; we’ll take them in the last fifteen minutes. And remember: nobody legitimate will DM you for wallet help.”

09

CHAPTER 09

Handling Difficult Situations

Every host eventually faces a difficult moment live. The audience watches how you respond more closely than what caused the problem.

THE CALM RESPONSE

RECOMMENDATION Agree roles with your co-host before the Space: the host keeps talking; the co-host mutes, removes and reports. Decide your removal threshold in advance, so you act on principle, not emotion.

Situation	What to do	Host script
Speaker talking too long	Wait for a breath; use ACT; escalate if ignored	“Daniel, that’s such a rich point, and I want everyone heard before time runs out. Aisha, does that match what you’re seeing?”
Speaker interrupting others	Protect the person interrupted	“Hold that thought, Kelechi. Let Mariam finish, and I’ll come straight back to you.”
Off-topic speaker	Validate, then redirect	“That deserves its own Space. For today, let’s bring it back to user safety.”
Two speakers arguing	Depersonalise; give equal, timed turns; move on	“You both feel strongly, which is healthy. Tunde, one minute for your strongest point; then Ada. Then we’ll let listeners weigh it up.”
Personal attack	Act immediately; mute; state the standard	“I’m stopping us there. Disagreeing with ideas is welcome; personal attacks aren’t. I’ve muted the mic. Let’s return to the discussion.”
Aggressive or hostile participant	Stay calm; one warning; then remove	“I understand you’re frustrated, and I’ll give you thirty seconds to make your point calmly. If we can’t keep it respectful, I’ll move you back to listener.”
Over-promotional speaker	Interrupt; restate the agreed limits	“I’ll stop you there, Ray. We agreed to keep today educational. Listeners, please verify any project through its official channels. Next question...”
Trolls and spam	Remove quietly. Never debate on air	“We’ve had a little noise on stage; that’s been handled. Where were we? Grace was explaining approvals.”
Harassment	Remove and report; support the target; follow up privately	“That behaviour isn’t acceptable here. The account has been removed and reported. Amina, I’m sorry you experienced that.”
Speaker’s audio failing	Ask them to rejoin; continue with others	“Hassan, you’re breaking up. Please rejoin with the same link and we’ll bring you straight back. Joy, can you pick up that point?”
Host disconnects	First co-host takes over; host recaps on return	<i>Co-host:</i> “Zainab has dropped for a moment, so I’ll keep us going.” <i>Host:</i> “I’m back. Thanks, Fatima. Quick recap for anyone just joining...”
Unexpected guest requests the stage	Check relevance and identity; limit time	“We have a request from someone knowledgeable on this. I’ll bring you up for one quick contribution, then return to our panel.”
Too many speakers	Rotate people back to listener	“We’ve got a full stage. To make sure everyone’s heard properly, I’ll move a few of you back for now and rotate you up during Q&A.”
Very few listeners	Reframe positively; deliver full quality	“We’re an intimate group tonight, which means we can go deeper and take everyone’s questions. And the recording will reach many more later.”

EXAMPLE**A listener accuses the project of being a scam**

During an AMA, a listener says loudly: "This project is a scam. You rugged your last community." (A "rug pull" is when a team abandons a project and takes users' funds.) The team reacts angrily. Your job is to protect fairness: neither suppress a legitimate concern nor amplify an unsupported accusation.

Say: "Thank you for raising that. Concerns like this matter to everyone listening. To be fair to all sides, an accusation isn't the same as evidence. What specifically are you referring to? Then I'll ask the team to respond, and to tell us where listeners can verify their answer."

Avoid: removing the listener simply for being critical, endorsing the accusation, or letting it become a shouting match.

REMEMBER

The audience does not expect you to prevent every problem. They expect you to handle it calmly and fairly, and then get back to the content.

10

CHAPTER 10

Etiquette, Dos and Don'ts

Etiquette is not formality. It is what makes a shared room work. When it breaks down, the most thoughtful voices leave first and the loudest stay.

BEST PRACTICE State your standards in the announcement, the briefing and the opening. Rules known in advance feel fair when you enforce them. Rules introduced mid-problem feel personal.

Role	Etiquette essentials
Host	Start and end on time. Treat every speaker equally, whatever their follower count. Model the behaviour you expect. Correct your own mistakes openly. Disclose commercial relationships.
Co-host	Support, don't compete. Handle requests, spam and safety quietly. Raise problems with the host privately, not on air.
Speaker	Read the brief and arrive early. Stay muted when not speaking. Answer the question asked. Signal before adding a point rather than cutting in. Accept time guidance gracefully.
Listener / guest	On stage: one sentence about yourself, one short question, then thank the speakers and step down. Report spam and scams. Don't pressure speakers in DMs afterwards.
Project representative	Respect promotional limits. Disclose your role and any financial interest. No price predictions or return promises. Official links only. "We don't know yet" is an acceptable answer.

Respect privacy and pseudonymity. Never share anyone's personal details, location or wallet holdings without consent, and never speculate on air about who a pseudonymous person "really" is. Exposing an identity can put someone at genuine risk.

DO	DON'T
BEFORE THE SPACE	
Send a written brief 48 to 72 hours ahead	Rely on verbal agreements or last-minute DMs
Convert times into each speaker's time zone	Assume everyone knows your time zone
Verify every link you plan to pin	Pin links you haven't personally checked
Add your most trusted co-host first	Add co-hosts randomly at the last minute
Test device, headset and connection	Host on low battery over unstable Wi-Fi
DURING THE SPACE	
Start within five minutes of the scheduled time	Wait twenty minutes for "more people"
Give rules and a safety reminder at the opening	Introduce rules only when a problem appears
Ask one clear question, then listen	Ask double or leading questions; read ahead while they talk
Balance speaking time and rotate the order	Let one voice dominate the stage
Separate fact from speculation out loud	Let rumours pass as news
Correct dangerous claims immediately	Stay silent to avoid awkwardness
Remove spam and scammers quietly	Argue with trolls on air
Keep your own comments short	Turn the Space into your monologue
AFTER THE SPACE	
Thank speakers publicly and privately	Disappear without acknowledgement
Correct errors made on air	Leave known mistakes uncorrected
Publish takeaways within 24 hours	Wait two weeks to post anything
Answer questions you promised to follow up	Forget what you said you'd check
Report numbers honestly	Inflate figures for sponsors

11

CHAPTER 11

Safety, Trust and Responsible Communication

When you host, you lend your credibility to everything said on your stage. In Web3, one careless sentence can cost a listener their savings.

FACT The US Federal Trade Commission reported that among people who lost money to crypto-related fraud between January 2021 and March 2022, nearly half said it began on social media, through an ad, post or message. **FACT** The FTC's consumer guidance is direct: only scammers guarantee profits or big returns, and no legitimate person will require you to buy cryptocurrency to solve a problem or protect your money.

You don't need to be a security expert. You do need to recognise the common patterns, refuse to amplify risky claims, and remind listeners how to protect themselves.

Threats every host should recognise

Threat	What it looks like around Spaces	What the host does
Phishing	Fake websites or “support” messages imitating a project, to steal logins or wallet access. Often posted in replies or sent by DM to listeners.	Warn listeners at the opening; remove posters; pin only verified links.
Impersonation	Accounts copying the host’s or speakers’ names and pictures, then DMing listeners.	State publicly: “I will never DM you first.” Report impersonators.
Fake giveaways	“Send funds first” or “connect your wallet to claim” offers.	A genuine giveaway never requires either. Say so.
Wallet drainers	Malicious links that trick users into approving transactions which move their assets.	Pin links only from verified official accounts or websites typed directly.
Investment scams	Guaranteed or unrealistic returns; pressure to act fast.	Stop the claim on air (Correction Ladder).
Fake partnerships	A minor integration presented as a “strategic partnership”, or one that doesn’t exist.	Treat it as unconfirmed until both parties announce it officially.
Fake jobs and “recovery” services	Roles requiring payment or a wallet connection; offers to “recover” lost funds for a fee.	Warn about these in career Spaces and support sessions.

Wallet safety in plain language

Repeat these often; newcomers need repetition. A **seed phrase** (or recovery phrase) is the master key to a wallet: anyone who has it controls the funds, and no legitimate person will ever need it. **Approving a transaction** can give a smart contract (a program running on the blockchain) permission to move your tokens, so read what you sign, and periodically review and revoke approvals you no longer need using reputable tools. Keep a separate wallet for experimenting, and ideally a **hardware wallet** (a physical device that keeps keys offline) for long-term holdings. Bookmark official sites. And slow down: urgency is a scammer’s favourite tool.

Responsible language for claims

BEST PRACTICE Hosts must never present speculation, guarantees or promotional claims as established facts. Do not allow price predictions presented as likely, “risk-free” yields, pressure tactics (“buy before it’s too late”), or undisclosed promotion of assets the speaker or host holds.

Instead of letting this stand...	...say
“This token is going to 10x.”	“That’s a prediction. Nobody can know future prices.”
“They’re partnered with a major exchange.”	“That hasn’t been confirmed on official channels yet.”
“It’s completely safe; it’s audited.”	“The audit covered certain contracts. Audits reduce risk; they don’t remove it.”
“Everyone’s buying this.”	“Popularity isn’t evidence of quality. Please do your own research.”

NOTE

Rules vary by country

Many jurisdictions regulate financial promotions and endorsements, and some have specific rules for crypto assets. For example, the UK applies its financial promotions regime to cryptoassets, and the US FTC expects material connections with endorsers to be disclosed. If you host commercially or for international audiences, take qualified advice. This handbook is not legal advice.

12

CHAPTER 12

Project, Brand and Sponsored Spaces

Project Spaces can be among the most valuable conversations in Web3, or the most misleading. The difference is almost always the host.

OPINION The best project Spaces feel like good journalism: curious, fair and willing to ask the question the audience is already thinking.

THE FAIR PROJECT SPACE

**Agree the terms in writing first**

Before any project or sponsored Space, agree: whether it is paid and how that will be disclosed; what may be promoted and how often; that you will ask about risks; that price predictions and return promises are not allowed; that pinned links must be official; and that **moderation decisions stay with the host**. A client who refuses that last point is a reputational risk. For paid work, also agree deliverables (promotion posts, recording, recap, clips, report), deadlines, payment terms and what happens if the Space is cancelled.

RECOMMENDATION Be cautious about payment in a client's own token. It ties your income to its price and creates a financial interest you must disclose.

Getting each project format right

Format	Questions that serve the audience
Project introduction	"What exists and works today, versus what's on the roadmap?" "Is the team public?" "What are the biggest risks for a user?"
Founder interview	"What was the hardest trade-off you made?" "What would make you shut this down?"
Community AMA	Collect questions in advance and read at least one genuinely difficult one. Communities notice when critical questions are filtered out.
Partnerships, launches and updates	"Is this a technical integration, co-marketing or an investment, and has the other team announced it too?" On launch days, warn listeners about fake "claim" links. Ask for setbacks as well as progress; good-news-only updates erode trust.

Disclosure

FACT X's Paid Partnerships policy requires organic posts that are part of a paid partnership to carry X's "Paid Partnership" disclosure, found in the content disclosure settings when creating a post. The policy notes that creators and brands remain responsible for complying with advertising laws, which vary by country, and that own-brand commercial posts also need disclosure.

BEST PRACTICE Because a Space is audio, also disclose verbally at the start and the end, and in the pinned post.

HOST SCRIPT

Disclosure, and stopping price talk

Disclosure: "A note on transparency: this Space is a paid partnership with ChainBridge. They've supported this session, but they don't control our questions or moderation. Nothing here is financial advice."

When a representative says "we're going to 20x after listing": "I need to step in. Nobody can know future prices, and we don't allow price predictions here. Listeners, please don't treat that as advice. Let's focus on what the product does today. Can you walk us through the first live feature?"

REMEMBER

A sponsor pays for a stage, not for your audience's trust. Protecting listeners is exactly what makes your stage valuable to future sponsors.

13

CHAPTER 13

Closing, Follow-Up and Long-Term Growth

A live Space lasts an hour. What you do in the final five minutes, and in the week afterwards, decides how long its value lasts.

Closing the Space

A strong close summarises, repeats the key message, thanks people and tells listeners what happens next. Never end abruptly, and never let it drift on for an extra hour; if you need more time, ask: "Let's take ten more minutes for those who can stay."

HOST SCRIPT

Closing and thanking speakers

"We're coming to the end, so let me summarise. Today we learned three things: scams rely on urgency and fake authority; your seed phrase should never leave your hands; and you can revoke old approvals in minutes. If you remember one thing, make it this: **slow down and verify**."

A huge thank you to Musa and Grace. Please follow them for more. Thanks to Fatima for co-hosting, and to every one of you for such thoughtful questions. The replay will be on my profile tonight and a recap thread follows tomorrow. Next week: how to read a smart contract audit. Stay curious, stay safe."

The follow-up

Within the hour, post a thank-you with the replay link and trim any dead air at the start of the recording. Message each speaker privately with a specific thank-you ("Your point about approvals really landed"). Within 24 hours, publish a recap, correct any errors made on air, and answer the questions you promised to follow up. Those small, reliable acts are what turn one-off speakers and listeners into long-term relationships.

Turning one Space into a content ecosystem

Most people will never hear your Space live, but they might read a thread, watch a 45-second clip or open a newsletter. **RECOMMENDATION** Ask a co-host to note timestamps of strong moments during the Space, and ask speakers before clipping their answers.

Asset	What to make	When
X post	Thank-you with replay link, plus one standout insight	Same day
Thread	Hook → context → 5–8 lessons → one action → replay link	Day 1
Clips	30–90 seconds of a complete answer or story, captioned	Days 1–3
Quote card	An exact quote with name and photo (with permission)	Day 2
Educational post	One concept from the Space explained simply	Day 2–3
Community prompt	An unresolved question from the panel, posed to your community	Day 3
LinkedIn or article	Professional lessons with context, sources and corrections	Days 4–5
Newsletter	Three to five takeaways and one quote, with the replay	Day 7

FACT X's Help Center describes a clipping feature for Spaces, and controls hosts have over clips made from their Space. Whatever tool you use, never edit a quote or clip so it changes the speaker's meaning.

Measuring what matters

FACT When a recorded Space ends, X shows the host how many people attended. Exactly which statistics the app displays can change, so note what is available and record it consistently. Capture peak listeners during the Space and replay figures afterwards where shown.

OPINION Listener count measures reach, not quality. A Space with 1,500 people drifting in and out may have helped fewer people than one with 40 who stayed an hour and asked thoughtful questions. Use a balanced view:

Dimension	Measure	Healthy sign
Reach	Peak and total listeners; replay figures	Growing over months, not just one spike
Depth	Listeners at the 10-minute vs 45-minute mark; questions asked	Most people stay past the midpoint
Value	Feedback, saves and shares of the recap	Comments like "I finally understand..."
Community	Returning listeners; new members; speakers willing to return	Regulars plus new faces each week

Ask listeners three questions afterwards: What was most useful? What was unclear? What should we cover next? And ask speakers: "What could I have done to help you give your best answers?"

Growing as a host

Reputation compounds. Good Spaces attract better speakers; better speakers attract engaged audiences; engaged audiences attract credible partners. The reverse is also true: one amplified scam, humiliated guest or inflated report can undo years of work.

Credibility: correct mistakes publicly; refuse to host what you believe is harmful. **Consistency:** a regular slot builds habit; consistent quality builds trust. **Focus:** become the host people associate with one area, such as security, education or careers. **Professionalism:** brief well, start on time, pay collaborators promptly. **Relationships:** promote your speakers' work and invite good guests back. **Portfolio:** for every Space, log the title, date, format, speakers, reach, highlights, content produced and one lesson learned. It is your evidence when approaching speakers, sponsors and employers.

14

CHAPTER 14

The Host's Toolkit

Professionals in aviation and medicine use checklists because they respect the cost of forgetting one step. Copy these, adapt them, and use them every time.

7 days before

- ☐ Purpose written: objective, audience, outcome, key message
- ☐ Format and length chosen
- ☐ Speakers selected and confirmed in writing
- ☐ Most trusted co-host confirmed (added first)
- ☐ Space scheduled; time set for audience time zones
- ☐ Announcement published and pinned
- ☐ Sponsorship disclosed (Paid Partnership label)
- ☐ Speakers sent link and ready-to-post message
- ☐ Question collection started

24 to 72 hours before

- ☐ Written briefing sent and confirmed
- ☐ Questions ready, with three reserves
- ☐ Agenda with timings ready
- ☐ Introductions written; opening and closing drafted
- ☐ All links verified from official sources
- ☐ Contingency plan and moderation roles agreed
- ☐ Reminder post published

1 hour before

- ☐ Phone charged and plugged in; app updated
- ☐ Wi-Fi stable; mobile data ready as backup
- ☐ Headset tested; quiet room; Do Not Disturb on

- ☐ Notes, questions and scripts to hand
- ☐ Final reminder posted

10 minutes before

- ☐ Space started for soft open; recording set
- ☐ Co-host added first; speakers added; audio checked
- ☐ Key posts pinned; tally sheet and clock ready

During the Space

- ☐ Formal start within five minutes
- ☐ Seven-part opening, incl. rules and safety reminder
- ☐ Disclosure given (if sponsored)
- ☐ Speaking time balanced; jargon explained
- ☐ Recap every 10–15 minutes
- ☐ Misinformation handled with the Correction Ladder
- ☐ Highlights timestamped
- ☐ Final five minutes protected for the close

Within 24 hours after

- ☐ Thank-you post with replay; dead air trimmed
- ☐ Private thanks to each speaker
- ☐ Recap thread and first clip published
- ☐ Errors corrected; promised answers given
- ☐ Metrics and feedback recorded
- ☐ Sponsor report delivered (if applicable)
- ☐ Self-review done; next Space idea noted

Templates

The opening, interruption, transition, disclosure and closing scripts appear in Chapters 6, 7, 9, 12 and 13. These five templates cover the written work around a Space.

TEMPLATE

1 · Space announcement

[Space title]

[One-sentence hook: the problem or question.]

Join [@speaker1] and [@speaker2] with host [@host] for a [format] on [topic]. You'll learn: → [outcome 1] → [outcome 2] → [outcome 3]

[Day, date] · [time + time zone] ([second time zone]) · [length] + live Q&A

Drop your questions below and tap "Set reminder" on the card. [If sponsored: Paid Partnership label on.]

TEMPLATE

2 · Speaker invitation

Hi [Name], I host [series] at [organisation], where we run [frequency] Spaces for [audience]. I'd love to invite you to speak on "[title]" on [date] at [time, time zone] ([their local time]). It's a [format] of [length], with [other speakers]. I'm inviting you because [specific reason tied to their expertise]. We'd ask you to [answer 4–5 questions / join the Q&A]; I'll send a full brief a few days before. [Payment details, if any.] Would you be available?

TEMPLATE

3 · Speaker thank-you and follow-up

Hi [Name], thank you so much for speaking today. Your point about [specific insight] really landed; several listeners mentioned it. Here's the replay: [link]. We'll publish a recap on [day], and would love to share a short clip of your answer on [topic], if you're comfortable with that. [Payment confirmation, if any.] I'd love to have you back.

TEMPLATE

4 · Recap thread

1/ [Most valuable insight.] Yesterday's Space on [topic] with [@speakers]: here are the key lessons.

2–6/ [One lesson per post, in plain language.]

7/ [Best quote, credited.]

8/ What to do next: [one practical action].

9/ Full replay: [link]. Thanks to [@speakers]. Next Space: [date/topic].

TEMPLATE

5 · Performance report (for teams and sponsors)

Space, date, format, length: [] · Objective, and was it met? [yes / partly / no, and why] · Reach: peak [], total attendance [], replay to date [] · Engagement: questions submitted / answered []; recap engagement [] · Community: new followers or members [] · Content produced: [links] · Highlights: [2–3] · Issues and how they were handled: [] · Recommendations: [] · Data notes: [where each figure came from, and when]

15

CHAPTER 15

Final Mastery Check

Use this self-assessment after each Space. It is a development tool, not a measure of personal worth. Your score simply shows where to focus next.

Score yourself from 1 (not yet) to 5 (consistently excellent) in each area.

Area	What "5" looks like	1	2	3	4	5
Preparation	Written purpose, brief, agenda, questions, contingency	☐	☐	☐	☐	☐
Communication	Clear opening, strong questions, smooth transitions	☐	☐	☐	☐	☐
Moderation	Balanced time, professional interruptions, on topic	☐	☐	☐	☐	☐
Audience management	Regular recaps, fair Q&A, listeners brought in well	☐	☐	☐	☐	☐
Speaker management	Right speakers, well briefed, treated fairly	☐	☐	☐	☐	☐
Technical readiness	Clean audio, backup connection, co-host handover ready	☐	☐	☐	☐	☐
Safety	Safety reminder given; scams removed; claims corrected	☐	☐	☐	☐	☐
Professionalism	On time, disclosed interests, respectful throughout	☐	☐	☐	☐	☐
Follow-up	Thanks, recap, corrections and metrics within 24 hours	☐	☐	☐	☐	☐

36–45: professional standard; refine the details. **25–35:** solid foundations; focus on your two lowest areas. **Below 25:** a normal starting point; revisit the matching chapters and practise with small Spaces.

FRAMEWORK

Ten principles of Web3 hosting

- 1. Purpose before people.** Know why the Space exists.
- 2. The audience comes first.** Every decision serves the listener.
- 3. Prepare more than you need.** Confidence comes from preparation.
- 4. Start on time, end on time.** Respect is measured in minutes.
- 5. One question at a time,** then listen.
- 6. Balance the stage.** Every speaker deserves fair time.
- 7. Label facts and opinions.** Never blur the two.
- 8. Safety is non-negotiable.** Remove scams and abuse immediately.
- 9. Disclose every interest.** Transparency builds trust.
- 10. Keep improving.** Every Space teaches you something.

CONCLUSION

The Responsibility of the Microphone

In Web3, a microphone is a position of trust.

When you open a Space, you are doing more than starting a conversation. You are deciding which ideas reach people who may be new, curious, hopeful and vulnerable. Some will make decisions with their money, careers and communities based on what they hear on your stage.

That is a responsibility, and an extraordinary opportunity. With nothing more than a phone, you can gather experts from every continent and make complex ideas understandable to thousands. Used well, that power makes Web3 safer, more honest and more welcoming.

You will not get every Space right. No host does. But if you prepare carefully, treat speakers fairly, protect your audience, separate facts from hype and keep improving after every session, people will learn to trust your stage. In an industry built on the idea of trust, there are few things more valuable to build.

Now open the app, plan your next Space, and host it well.
